

actib

precision you can feel

Identifying the problem

the challenge

Setters lack real-time feedback to refine technique

Traditional training methods rely on delayed corrections

Small, unnoticed errors limit player development

Research & User insights

key insights

Athletes benefit from instant feedback

Overloading with visual/audio cues can be distracting

Vibrational cues allow for intuitive, non-intrusive correction

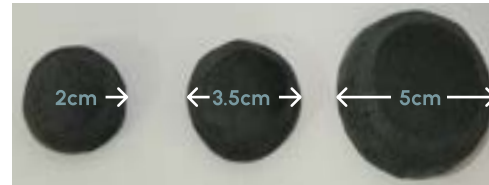

Ideation

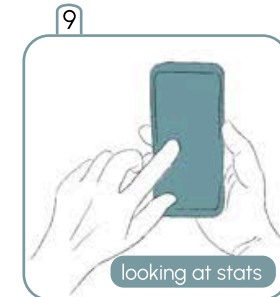

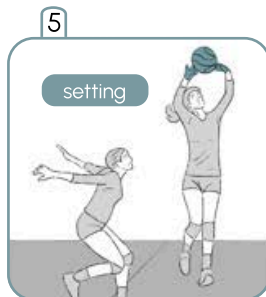

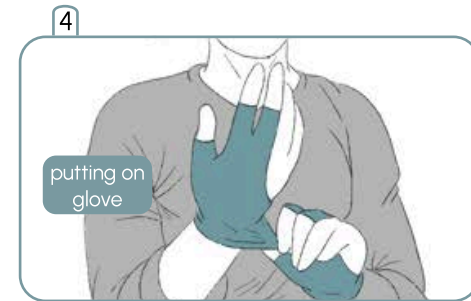

sketches

lo-fi prototyping

storyboard

Design exploration & Key insights

Haptic Feedback Sensors

Immediate response to hand positioning

Ergonomic Fit

Snug design ensures precise motion tracking

Smart Integration

Pairs with an app for real-time insight

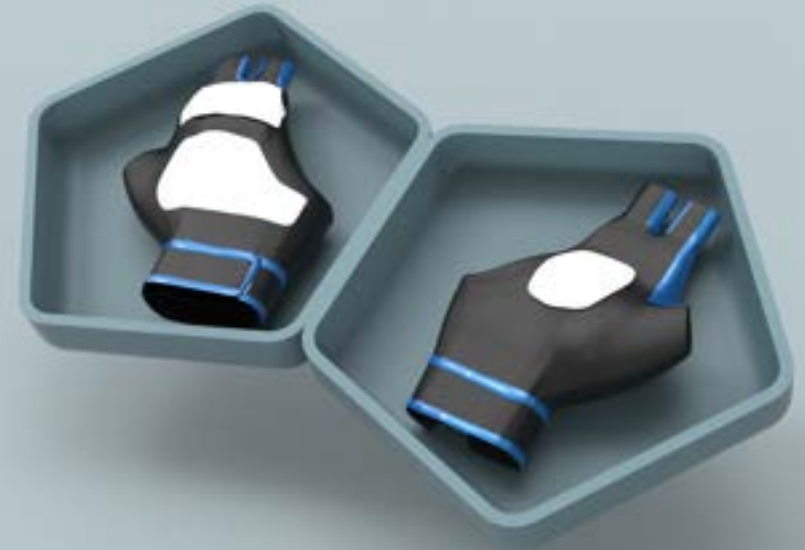

Final Design & User Experience

instant feedback, smarter training

✓ Haptic cues correct technique in real time

✓ Seamless integration with training routines

✓ Designed with players, for players

Final & Next steps

Designed to Improve,
Built to Perform

Thank you for listening!
